

# School yard markings in Germany

## Health, movement and mobility in Niedermittlau

Beginning of 2008, the Auwiesenschule Niedermittlau in Germany decided to renew the school yard surface. This was related to the certification as "Health & Movement" and "Health & Mobility" school.

The old painted playground markings were no longer to be seen, so the parents adviser board decided to go with DecoMark®. Mainly, because of the long durability and the high skid resistance making it safe for children to play.

Now the school both has creative playground markings and a safe traffic training track for the children.
